Date: Jan 12, 2026

Dear Dr. Wagner,

Thank you for requesting evaluation of Chaos Caywood at your clinic. Chaos Caywood was evaluated on January 12, 2026. The pertinent facts of the case are:

History:

New Mobile Cardiology Consultation - Drop Off

History: Chaos presented for a routine examination. There are no clinical signs of heart disease at this time.

Current Medications: N/A

Examination & Diagnostic Testing:

Physical Examination (Cardiac Specific)

Physical examination demonstrated no cardiac murmur. A heart rate of 210 beats per minute was obtained and femoral pulses were within normal limits. Respiratory rate and character were within normal limits (30-40 bpm).

Echocardiography

Echocardiography demonstrated left ventricular wall and chamber dimensions as well as left atrial dimensions to be within normal limits. Right side chambers and valves were within normal limits. There were no heartworms noted in visible portions of the pulmonary arteries. Color Doppler and pulsed-wave Doppler echocardiography demonstrated no turbulent flow.

Assessment:

There is no echocardiographic evidence of clinically significant structural heart disease (patient was reportedly possibly pregnant at time of echocardiogram).

Recommendations:

Further Diagnostic Tests: N/A

Medications: There is no indication for cardiac medications at this time.

Diet: A standard diet should be provided.

Exercise: Normal activity may be allowed.

Recheck/Comments:

Routine screenings as indicated would be acceptable.

Anesthesia: I see no echocardiographic contraindication for anesthesia if planned at this time.

Additional Notes: Recheck echocardiography may be considered yearly to every other year to continue to rule out acquired heart disease in this breed.

We appreciate your referral and please do not hesitate to call if there are any questions regarding this case.

Sincerely,
Davin J Borde, DVM, DACVIM (Cardiology)
